USER MANUAL

Round Ice Ball Mold

Circle Ice Cube Ball Maker Freezer Tray

How to use your new ice ball mold:

- Before using your new ice tray be sure to wash it thoroughly with soap water.
- Fill the bottom tray with water make sure to leave 1cm unfilled .
- Then set the bottom tray on an even surface and press the top tray down into the bottom tray until it is properly sealed.
- When full gently press down on the top of each mold to force out enough water to give a slight air gap for the balls expansion so the ball forms properly without cracking.
- Lay it flat in the freezer for about 5 hours.
- Do not worry about the excess water in the tray, let it freeze with the mold.

After freezing follow the steps below:

Before removing the top tray break all the ice around balls in a twisting motion.

Don't worry about breaking the mold it is made out of silicon.

- Now remove the top lid and release ice spheres from the bottom tray. Ice balls are now ready for removal.
- Use how many you need and store the rest in zip bags in the freezer.

Tips to get clear ice:

- Always use distilled/filtered water.
- Boil the water first then let it cool down so the microscopic bubbles trapped in the water will escape.
