5. Do not use the unit as a power inverter (i.e., converting battery DC power to AC power) for other devices. The unit is not designed for this purpose.

6. Ensure that the unit is properly secured and fastened to prevent it from moving or falling while in use.

7. The unit should be used within the temperature range of -10°C to +50°C. Operating outside this range may cause damage to the unit.

8. Do not immerse the unit in water or any other liquid. Exposure to moisture can lead to malfunction or damage.

9. Keep the unit away from direct sunlight and heat sources. Exposing the unit to excessive heat can cause it to overheat.

10. Do not use the unit in environments with high humidity or where condensation is likely to occur. Condensation can damage electronic components.

11. The unit is designed for use with 12V DC power sources. Ensure that the power source is compatible and properly connected.

12. The unit should be used in a well-ventilated area. Overheating can occur if the unit is not ventilated properly.

13. Do not disassemble or modify the unit. Unauthorized modifications can void the warranty and may lead to malfunction.

14. The unit is equipped with a fuse to protect against electrical overloads. Replace the fuse with a compatible one if it malfunctions.

15. When not in use, disconnect the unit from the power source to conserve battery power.

16. Regular maintenance is recommended to ensure the unit's optimal performance. Contact the manufacturer or a qualified technician for recommended maintenance procedures.

17. This device complies with Part 15 of the FCC Rules. Operation is subject to the condition that this device does not cause harmful interference.
