Stringed Jam Cajon - Wooden Cajon Percussion Box

PCJD25 - PCJD16 cajon is a box, usually constructed from hardwood, that you sit on whilst playing. When you hit any face of the cajon, the wood will resonate to produce a tone. Harder woods like birch & beech tend to produce stronger more defined bass tones & more cutting high tones. Each wood has its own sound characteristics. The top surface forms a seat.

The best approach to playing your cajon is to spend time playing the various surfaces using different intensities (hardness) of stroke & playing in different places (eg. top, middle, bottom, side). Get to know your cajon & understand how you create different tones & sounds.

Stroke

- **Bass** : Same as drum's kick.
- **Tone** : Same as drum's rich snare.
- **Tip** : Works just like hi-hat or percussion.
For background percussive sounds or ghost notes.
- **Slap** : Same as drum's agile snare.
More stronger sound than Tone.
- **Finger** : Finger stroke sounds.
Very useful for ghost notes.
- **Noise** : Swirl sounds with brushed or hands.
