Installation Guide.

For the easiest possible installation, please read and follow these tips.

1. You'll need a Cat5 (Ethernet) cable for the audio and power.

2. For best results, do not use the Ethernet (RJ-45) jack on the output box — you should not crimp RJ-45 connectors onto the Cat5 cable. *Instead, separate the wires by color and use a Cat5 punch down tool to individually connect each wire to the white connector.* The order, from bottom to top, is as follows: brown-stripe, brown, green-stripe, green, orange-stripe, orange, blue-stripe, blue.
