INSTRUCTION & MAINTENANCE MANUAL FOR WATER DISPENSER WITH COMPRESSOR

VERY IMPORTANT YOU MUST READ BEFORE USE.

If the supply cord is damaged, it must be replaced by the manufacturer, its service agent or similarly qualified persons in order to avoid a hazard.

This appliance is not intended for use by persons (including children) with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, unless they have been given supervision or instruction concerning use of the appliance by a person responsible for their safety.

Children should be supervised to ensure that they do not play with the appliance.

To avoid the danger caused by fire using without water, this water dispenser has been fixed a manual thermostat on hot water tank, when used without water, the manual thermostat will cut off the power and the water dispenser can’t be worked again until the manual thermostat will be the dealer or its service agent.

Please check the bottle is in good condition, this soft and bottle leakage on the bottle and bottle cap will cause the leakage in the water dispenser.

WITH UNITS HOT TANKS

Note: On hot and cold units, the hot tank must be filled with water before connecting water dispenser to the electrical source. Air must be bled out of the hot tank by depressing the hot side (red) faucet to fill the hot tank with water before energizing the unit. (The tank is full when water is free of air bubbles and flows from the hot faucet). Both hot and cold units are equipped with an On/Off switch, which controls the hot tank. These units are shipped with the hot tank control in the off position. The On/Off switch is located on the rear of the water dispenser.

Please cut off the power when no water or water will be used out very soon.

NOTES
1) Do not clean the dispenser by water, which will cause electric shock. Please clean it by wiping with soft fluids.
2) As to mineral water, you must clean it with every 2 months.
3) Use as excited wall socket; the cord and plug must be dry.
4) Do not make modification to the power supply plug or lengthen the power supply wire which will both cause overheating or fire.
5) Do not step the machine by inserting or pulling the power supply while the machine is working for it is very dangerous.
6) The appliance must be positioned so that the plug is accessible.
7) WARNING: To avoid a hazard due to instability of the appliance, it must be fixed according to the instructions, please refer to "INSTALLATION INSTRUCTION FOR BRACKET" as below.
8) Do not place the machine in the sun or in a damp environment.
9) Do not put the machine beside moves, boiler or the place where sunshine can directly irradiate.
10) When moving this machine, please do not place it in reverse or excessively decelerating to avoid knocking or impacting.

BASIC OPERATIONAL GUIDELINES

Always upgrage the water dispenser from the wall outlet when out of water.
When the power is disconnected for any reason, wait five minutes before reconnecting.
Locate the water dispenser cooled by compressor in a well-ventilated area making sure there is at least 2’ (about 5m) of clearance around the back of it for proper airflow. The noise level of the machine is below 70dB.
Locate water dispenser within a suitable grounded electrical outlet.
To help prevent algae growth, do not place water dispenser in direct sunlight or in front of leading vents.
Choose a location where floor is level. If water dispenser does not set level to the floor use a thin slim under one of the feet at the base of it.
The water dispenser is pre-cleaned at the factory. However, the minimum steel reservoir and water line must be sanitized and flushed with fresh water before use. Regular cleaning and sanitizing is advised to ensure continued quality of water consumed.
Before plugging in, check the power level on the rear of the unit to ensure the power supply is correct. Serious damage could result if the incorrect supply is used.
Never store or pour out water from the dispenser in a safe for plants or garbage of other objects. Keep area around water dispenser free of dust and dirt.
If water accidentally splashes inside the water dispenser, unplug the unit, remove excess water and dry it off and put back into storage.
Do not locate water dispenser in area where the temperature may fall below freezing. The suitable surrounding temperature is 10°C to 32°C, if the water is below freezing, let water dispenser stand for a few minutes to allow the ice in the reservoir to melt. Add hot water to speed up this process, and at the same time, remain the power off for a longer period of time when no use is taking it, and this saves energy and prolongs the lifetime of the compressor.
Never place the water dispenser out of doors, it is not suitable.
When used, please do not incline it around 45 degree. Please do not use it in water-supplying condition; the water dispenser also can not be sanitized by way of water-supplying.

MAINTENANCE FOR WATER DISPENSER COOLED BY COMPRESSOR

At regular intervals, inspect the condenser (wet grid located across the back of the water dispenser) for dust and accumulation.
Always upgrage the water dispenser before any cleaning! Vacuum accumulation or clean with a stuff brush. Regular cleaning will help to keep the water dispenser running efficiently and economically.
The compressor is hermetically sealed and requires no lubrication. It is also fitted with an automatic reset overload protection switch.

HOW TO CLEAN AND SANITIZE YOUR WATER DISPENSER

1. Unplug the water dispenser from the electrical outlet.
2. Shut off the water supply and remove the water guard.
3. Drain off any water left in the reservoir and hot and cold tanks through the funnels and drain plugs.
4. Let water dispenser stand for a few minutes to allow any ice in the reservoir to melt. Add hot water to speed up this process.
5. Fill reservoir 3/4 full of fresh clear water and add 1/2 tablespoon of liquid bleach to water.
6. Do not use a stronger sanitizing solution.
7. Allow water to stand for 2 to 5 minutes.
8. Drain sanitizing solution out of the reservoir through the funnels and drain plugs.
9. Flush thoroughly with clean water.

If a water problem develops, please 1 tablespoon of baking soda into cooling tank and add fresh water. Allow this solution to stand for 5 minutes, then drain.
