Rearview Back-Up Camera

Parking Reverse Cam with Distance Scale Line Display,
Full Color Night Vision, Waterproof

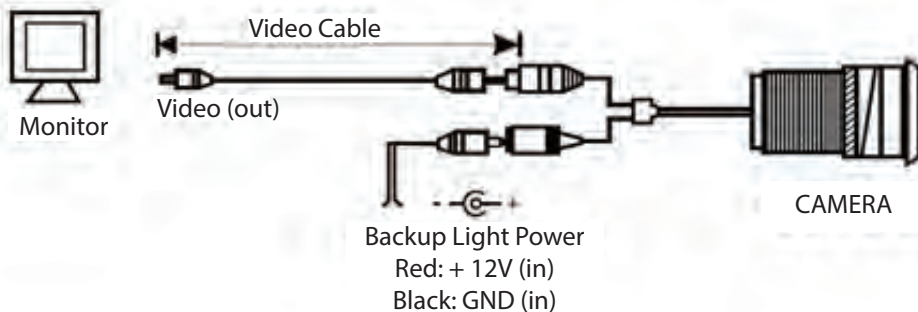

**Please read instructions carefully before installation and use.
Installation should be performed by a professional installer.**

1. Wire Connection

Please hard wire the red positive wire connected to the round 1mm DC plug (pictured below) to your reverse tail light positive 12V connection and the black wire to the closest available ground. You will probably need a small length of wire to reach from your reverse tail light to the DC plug.

2. There is one 2 jack on the camera unit cable, the yellow RCA jack is for the video output, and red is for 12V DC power supply.
3. There is one more black wire along with the camera unit , this cable is the IR LED control cable, because this model uses the starlight solution, works very good even when the IR LED is not working. The IR LED works on the unit would like normal camera with IR for night vision. Add IR LED control wire to use the IR. When the wire is connected to the DC 12V power, the IR LED will work, if disconnected to the DC 12V power, the starlight function will be used for night vision.
4. Please plug the round 1 mm DC plug that you just wired to your reverse tail light into the red (A) power connection (pictured above)
5. Use the included 5m video cable to connect the yellow video wire (B) to your video monitor.

Attention: The camera switch is controlled by the reverse gear shift. When you put your car in reverse, the camera will receive its 12 V power from the reverse tail light.
