CONTROLS & FUNCTIONS

CONTROLS & FUNCTIONS

- [LEVEL] Controller:** Control the input level of each channel, adjust to balance the volume.
- [STEREO/MONO] Converting switch for 6.35 input signals:** Press down for MONO, bounce up for STEREO.
- [OUTPUT] Controller:** Adjust the volume of main out.
Note: Excessive high volume output may damage the output operation equipment (such as speakers, headphones, etc.). Please turn the output controller to zero or an appropriate volume position before turning **ON** the device.
- [1-8 CHANNEL OUTPUT MIX L-R] Button:** Press it to mix the audio output of 1-8 inputs, at this point A/B output audio synchronization.
Note: Please turn the A/B output knob to the minimum output volume before pressing this mixing button.
- [BT/USB] Converting switch:** When it is bounced up, the input signal is from Bluetooth. Press it down, the input signal is from USB.
- Power and Bluetooth indicator:** It will light up when the mixer's power is **ON**. It will flash when connecting Bluetooth. After the Bluetooth is connected, the flashing speed will slow down.
- 6.35 Input jack:** Connect signal sources with line level to this mono or two-channel input. If the volume of the signal source is adjusted too high, the input end of the corresponding channel may be distorted.
- 6.35 Output jack:** For transmitting output signal.
- Type-C terminal:** For data transferring, recording and power supply.
When connected to a computer, it supplies power to the mixer, and audio data can be sent between mixer and computer. Supports stereo play and record with 24 Bit, 48kHz sampling rate. When using as a power socket or power bank for power supply, it must meet the following requirements:
Output voltage: 4.8V to 5.2V
Output current: 1A or even more
- [GND] Connection:** When connecting multiple devices, please connect the ground wire of each device shell to each other, which can reduce the bottom interference noise and increase the safety of use.
