- Fill the portable bidet with cool or warm water and screw the nozzle cap on securely. Be sure to use caution when using hot water.
- Place a finger on the air lock to prevent the water from leaking and prepare to turn the bottle upside down. Once inverted, water spray will start immediately, **UNLESS** the air lock on the bottom is covered with your finger.
- When ready with bottle in position, release your finger and allow spray to clean intended area.
- Water will spray out soft and gentle, but pressure can be increased by squeezing the portable bidet bottle tighter. Adjust grip for desired water flow.
- Practice positioning bottle at different angles, both front and rear, to find best angle for your usage.
